

Do you have a spinal cord injury?

Are you between the ages of 18 and 64?

Do you speak English fluently?

If you answered YES to these three questions, you may be eligible to participate in a research study with the Craig Hospital examining the effectiveness of a screening battery of thinking skills in a SCI population!

What will be asked of me?

- If you participate, you'll complete hands-free testing via Video-conference Zoom that will assess your thinking ability and you will fill out several questionnaires that ask about everyday functioning, how you feel about life, and your mood.
- Will take a total of 3 hours to complete.
- You will be compensated for your time.

The study's Principal Investigator is Research Scientist, Jennifer Coker, PhD.
