

Participants Needed

RESEARCH STUDY ON HEART AND BRAIN HEALTH AFTER SPINAL CORD INJURY

Individuals with spinal cord injury are at a higher risk of early heart attacks and strokes. This study investigates blood vessel function to help prevent these conditions.

We are seeking individuals living with a SCI to participate.

Participants will attend:

- Session 1: Comprehensive cardiovascular evaluation including physical exam, blood tests, and ECG.
- Session 2: Advanced vascular function testing.

Compensation will be provided.
